# Needs for HPC/Super-computing, cloud computing infrastructures

- In many R&D projects with key roles of data/software integration, data management and ecosystem providers
- Currently capitalizing on leased cloud computing services residing in Europe
- Access to national Super-computing infrastructure (ARIS) possible only for research/academic partners and public administrations
  - And this only upon request, granting access for limited period.
- Sustainability of data-driven services could be facilitated by capitalizing on easily accessible and of reasonable prices HPC infrastructure and support

# Thank you!
